PURESOURCE ULTRA® II ICE AND WATER FILTRATION

The PureSource Ultra II is a best-in-class filtration system that will remove 99.3% of lead and 99.9% of cysts from the water.

VEGETABLES FRUITS

CRISPSEAL

CRISP SEAL™ CRISPERS

The redesigned crispers have a tighter seal which helps them retain up to 40% more humidity than earlier crispers. A more humid environment helps fruits and vegetables maintain their “just back from the farmer’s market” freshness longer.

MULTI-DOOR FFBN1721TV

Adjustable Freezer Bins

Four clear bins and two pull-out drawers take the guesswork out of the freezer.

Adjustable Glass Shelves

Organize and customize based on your family's needs with 2 Space Wise™ adjustable glass shelves.

Easy Access Control Panel

The settings panel has been conveniently located on the exterior refrigerator door.

LED Interior Light

LED lighting throughout the refrigerator offers better visibility across all shelves.

Dual Evaporators

Our dual evaporator systems are able to control humidity in the freezer and refrigerator separately, reducing the spread of odors, the onset of freezer burn, and any fluctuations in humidity.

REFRIGERATION

recast

Explore how adjustments
across ALL lines have made the
refrigerator the center of the
kitchen once again.

ENJOY THE
FLAVOR OF
fresh

The Fresh Food Icemaker was redesigned from the ground up. It now performs consistently, and makes great-tasting ice!

E**F****G****T**

Aluminum Evaporator & Single Piece Design

Redesigning the unit as a single system makes the all-aluminum Evaporator housing less prone to production issues. The new housing material also provides better defrost performance.

New Recessed Fan Housing

Gaskets are now built from a single piece of resilient rubber. Their placement around the unit creates a barrier to keep unwanted moisture out of the system and prevent air leakage.

New Rubber Gasket

The housing for the evaporator fan has been repositioned and slightly recessed 2 ½ inches away from the fan. This eliminates any interference to the fan from frost build-up or drainage during defrosting.

New Electronic Thermocouple

The addition of an electronic thermistor inside the new electronic thermocouple offers more accurate temperature control (within +/- 1°F vs. earlier systems).

SELF-CLOSING DOORS

.....

Grocery-mode keeps these strong, high-quality doors locked open at a 90° angle, but at a 45° angle or less, the self-closing functionality is activated. This helps prevent frost build-up or temperature fluctuations that can occur because a door was left open.

BRACKETS FOR UPPER WIRE FREEZER BASKET

.....

Molded-wire basket clips help the basket to stay in place (even in a freezer full of ice cream).

new PINION WHEEL AND STABILIZER BAR IN FREEZER

All freezer drawers have been re-engineered for improved usability. Redesigned pinion wheels bring with them a smoother glide out and return with a whisper-soft close. Their improved construction includes the addition of a stabilizer bar to keep the drawer sealed and strong, even with a fully loaded freezer.

Each drawer has also been given an updated fit, feel, and finish.

MAKING
REFRIGERATION

better

QUALITY FOCUSED

We have been listening to our associates and consumers and what we heard them say was that we needed to refocus our commitment to quality. And that's what we've done. We are making a step-by-step change - through innovation, design, product development, and manufacturing - in order to deliver best-in-class experiences to kitchens around the world.

What do consumers think?
